

Tag

Contactless key fob to control security modes

Sold in packages of 3, 10, or 100 devices

Convenient access to a system

- One Tag key fob can be paired with 13 Ajax systems.
- Set the name and access permissions for each key fob in the app.
- Modify Tag access permissions in real time: revoke, restrict, change, or expand users' access to security systems and groups.
- Every action is recorded in the event log, providing a history of system interactions.

Sabotage resistance

- Copy protection.
- Triple DES encryption and AES hardware encryption with a 128-bit key.
- Authorization confirmation. The feature allows setting up two-factor authentication to control the system security modes, which requires both Tag and a passcode for authorization.

Connection and configuration

- Tag is added to the system through the app by presenting the key fob to the keypad in the settings menu.
- Access settings can be changed remotely.

Pass. Same device,
but in a different form.

Contactless card to control security modes.

Superior, Fibra, and Baseline product lines are mutually compatible. This opens up numerous possibilities for building systems of any configuration.
